QTM-340: Data Science with Text
Final Project Brainstorming Sheet
Due Tuesday, 10/6 4:20 PM via Canvas

To begin your final project, you need:

1) Data
2) A method
3) A question

Your task is to choose **three** datasets and to propose **a method and a question for each**. You have ample resources at this point. The introductory form for the final project provides various sources where you can find data. You also know how to scrape the web and access APIs. You have been introduced to a variety of methods. And our "Sharing Data Science Projects" discussion forum on Canvas is full of models that demonstrate how to ask good questions.

Submission details:

Your homework should consist of a Word doc with **three iterations** of the following:

1) 75-100-word description of your data.
2) The method you propose to use with it
3) The question you pose

You will circulate this document to peers in groups on Canvas that I will assign, with whom you will brainstorm in class on Thursday
